

Challenging the way, you see SDS authoring software

Thank you for taking an interest in ALMEGO®. It will not be wasted on pictures of happy people and meaningless buzz words. We would like to explain ALMEGO®, what it can do for you, and what you can expect from our SDS authoring software.

If this is already too much to read, then do what many others have done: **Try out the software at almeago.com** and see how ALMEGO® brings user friendliness, flexibility and guidance to a new level. Using your web browser, ALMEGO® is just a few clicks away.

Why try ALMEGO®?

SDS authoring software solutions have seen many changes over the last few years. So, make sure that you are using the best and most effective software tool. Online access to ALMEGO® makes it easy to compare and check out our software.

Try a software with an advanced **CLP calculator** and **smart-rule authoring**, offering a **high degree of automation** and smart **updating features**. Even if you have already tried some or all these features, you should still try ALMEGO®. We have added completely new features to this next generation of SDS authoring software.

ALMEGO® also offers built-in **user-friendly guidance**, **cost-effective and flexible pricing** (licence or vouchers with pay per SDS) and the accessibility and **flexibility of an online (SaaS) solution**.

If your current software only has some or a few of the features mentioned above, do not hesitate to try out ALMEGO®. The convenience of your current solution and any concerns you might have about data migration should not stop you. The built-in guidance and user-friendly interface will be a help, and we are also often able to help with a data migration.

Why use ALMEGO®?

Having an SDS authoring software often means that you have invested time in learning how to use the software. You would not normally consider changing software, if a new software is only slightly better than your current solution. People will typically only switch if they know that the new software is superior to the old software in several areas.

Based on more than a decade of working with SDS authoring software, we created a list of 12 key needs/requirements. These are*:

1. Fair pricing	5. Guidance, help and hotline	9. Handling of Exposure Scenarios
2. High SDS quality	6. Manual flexibility	10. Low license commitment
3. High level of automation	7. Many languages	11. Integration possible
4. Very user-friendly	8. Future-proof IT platform	12. Data migration possible

With ALMEGO®, we have created a software that aims to be the best in all categories. ALMEGO® is therefore the essence of user-driven development.

*You can read more about these features/key requirements and other specifications in our guide: “Article on SDS software evaluation criteria”, which you can download from our website.

Why do you need new tools?

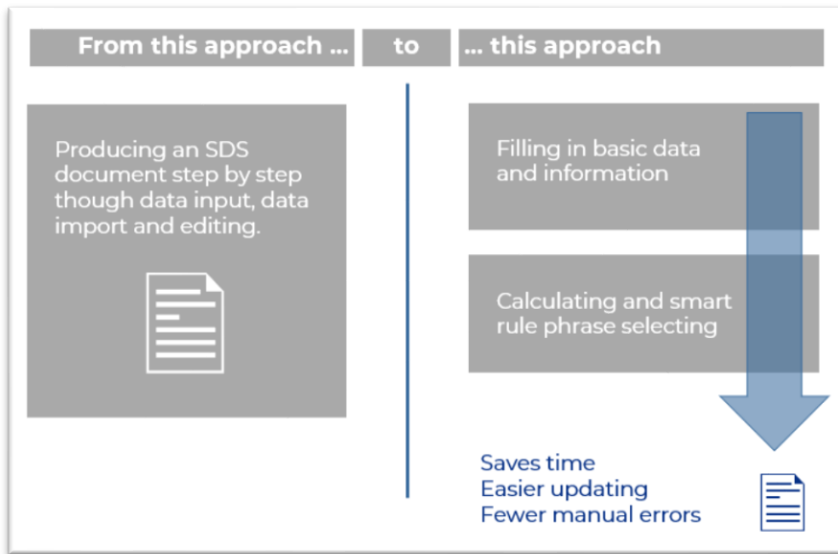

Chemical legislation underwent a revolution between 2007 and 2018, when the CLP regulation was implemented. At the same time, the entire world is going through a digital revolution. It was obvious that there was a need for new software and new ways of thinking SDS authoring tools.

New regulations, increasing volumes of data and high complexity of legal requirements call for software that can offer guidance and a high degree of automation. It was against this background that we developed ALMEGO®.

How does the software work?

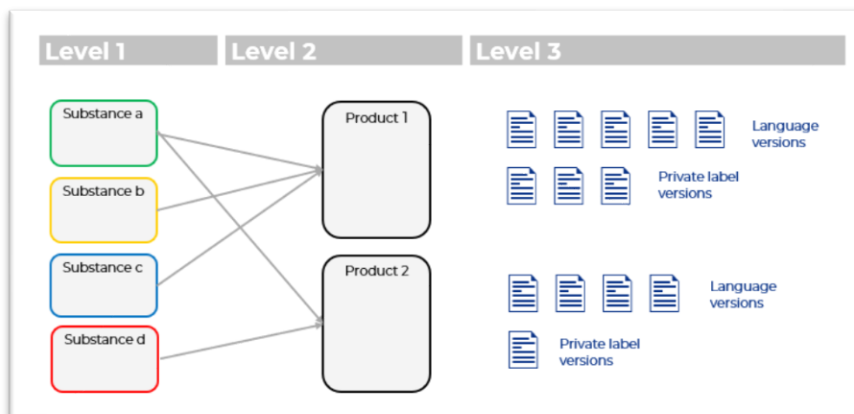

Smart-rule authoring offers a new approach to producing SDS documents. Instead of going through an SDS section by section and choosing from an abundance of drop-down-menus, the smart rules approach uses basic data, software logic and rules to generate text for the SDS.

Our first software AlphaOmega also worked with smart-rule authoring. The processes are therefore not new to us.

Please note that smart-rule authoring does not mean that you lose control over your SDS documents. If needed, you can still add and edit data and phrases manually.

The high degree of automation in the software is possible because there is a clear structure in the software - with the substances as the building blocks. The combination of smart-rule authoring, the CLP calculator and this building block structure allows a very high degree of automation.

Who are behind the ALMEGO® software?

CHYMEIA ApS is a Danish company, specialising in software solutions for chemical management and authoring of Safety Data Sheets (SDS).

Our mission is to automate and simplify chemical document compliance processes and improve document quality.

In 2006, we launched our first SDS authoring software, AlphaOmega. The software was a success primarily due to the high degree of automation in the SDS authoring process.

In 2010, we launched one of the world's first CLP-calculators, several years before most of our competitors.

In 2014, 2015, 2016 CHYMEIA was awarded the Danish Gazelle, a recognised Danish award for being part of the Danish business growth elite.

Our first SDS authoring software was an instant success. However, we wanted to disrupt ourselves and have continued to invest in software development knowing that requirements and what is possible are constantly changing.

Since 2012, CHYMEIA ApS has been developing our next generation of SDS authoring software, ALMEGO®, which was launched early 2019.
